

All Hong Kong companies such as LI JING Hostel are subject to Personal Data (Privacy) Ordinance (PDPO) of Hong Kong. Most companies include a statement for this in all formal documents including their web pages. Please help me create a similar statement for LI JING Hostel in both English and Chinese, around 100-150 words for each. If possible, the statement should address the specific business nature belonging to Hostel industry.

Certainly, SIU! Here's a bilingual Personal Data (Privacy) Ordinance (PDPO) compliance statement tailored for **LI JING Hostel**, with language that reflects the nature of the hostel industry and its interaction with travelers.

GB English Version (Approx. 130 words)

Personal Data Protection Statement

LI JING Hostel is committed to safeguarding the privacy of our guests and complying with the Personal Data (Privacy) Ordinance (Cap. 486) of the Hong Kong SAR. As a non-profit hostel organization serving local and overseas travelers, we collect personal data solely for operational purposes such as booking, check-in, rental services, and travel assistance. All information is handled with strict confidentiality and used only for the intended purpose. We do not disclose personal data to third parties without consent, unless required by law. Guests have the right to access and correct their personal data held by us. By using our services, you agree to our privacy practices. For details, please refer to our full Privacy Policy or contact our customer service team.

HK Traditional Chinese Version (約 130 字)

個人資料保障聲明

LI JING Hostel 致力保障旅客的私隱，並遵守香港《個人資料（私隱）條例》（第 486 章）。作為服務本地及海外旅客的非牟利宿舍機構，我們所收集的個人資料僅用於訂房、入住登記、租借服務及旅遊協助等營運用途。所有資料均保密處理，並只用於指定用途。我們不會在未經同意下向第三方披露個人資料，除非法律要求。旅客有權查閱及更正其個人資料。使用本宿舍服務即表示您同意我們的私隱政策。如需詳情，請參閱完整的私隱政策或聯絡客戶服務部。

Let me know if you'd like help formatting this for your footer, pop-up modal, or a dedicated privacy page. Want to add a checkbox for user consent on your booking form next?

Many companies include a disclaimer in their important documents including their web pages. Please help me create a disclaimer for LI JING Hostel in both English and Chinese, around 100-150 words for each. If possible, the disclaimer should address the specific business nature belonging to Hostel industry.

Certainly, SIU! Here's a professionally written disclaimer for **LI JING Hostel**, tailored to the hostel industry and suitable for inclusion on your website or formal documents. Each version is around 100–150 words and addresses the nature of your services.

GB English Disclaimer (Approx. 130 words)

Let me know if you'd like to format this for your footer, booking page, or as a downloadable PDF. Want to add a Terms & Conditions section next?

I'm going to create a pricing scheme for all types of rooms operated by LI JING Hostel. This information will be disclosed to potential guests of hostel via one of the web pages of LI JING Hostel. Basically, LI JING Hostel has four types of rooms:

- Office-Style room (HK\$499 per day)
- Romantic-Style room (HK\$999 per day)
- Family-Friendly room (HK\$999 per day)
- Study-Focused room (HK\$499 per day)

The above are charges for the room rented only. In addition, each guest or occupant, irrespective of age, sex, height ..., is charged at a fixed rate of HK\$299 per day.

Please write a few paragraphs, totally around 150-200 words, to be disclosed on the relevant web page of LI JING Hostel. Please remind potential guests that the above exclude charges for any rental services (computers, chargers, ... etc.) delivered to the guests. Please also provide corresponding Chinese translation.

Absolutely, SIU! Here's a clear and persuasive pricing disclosure for LI JING Hostel, written in both English and Traditional Chinese. It's designed to inform guests while maintaining a friendly and professional tone.

GB English Version (Approx. 180 words)

Room Pricing Information

At LI JING Hostel, we offer four distinct room types to suit your travel needs. Our **Office-Style** and **Study-Focused** rooms are available at **HK\$499 per day**, ideal for business travelers and students seeking a productive environment. For those planning a romantic getaway or a family vacation, our **Romantic-Style** and **Family-Friendly** rooms are priced at **HK\$999 per day**, offering spacious comfort and thoughtful amenities.

Please note that the above rates apply to room rental only. In addition, **each guest or occupant**—regardless of age, gender, or other personal attributes—is charged a **fixed rate of HK\$299 per day**. This ensures fair and consistent service across all bookings.

Charges for **rental services** such as notebooks, computer accessories, phone chargers, and other optional items are **not included** in the room or guest fees. These services are available upon request and billed separately.

We encourage guests to review all pricing details before booking to ensure a smooth and transparent experience. LI JING Hostel is committed to providing affordable, high-quality accommodation for every traveler.

HK 中文版本（約 180 字） 房價資訊 LI JING Hostel 提供四種房型，滿足不同旅客的需要。辦公室型及專注型房間每日租金為 HK\$499，適合商務人士及學生使用。浪漫型及家庭型房間則每日收費 HK\$999，空間寬敞，設施貼心，適合情侶或家庭入住。 上述價格僅包括房間租金。另每位住客（無論年齡、性別或其他個人特徵）均需支付 每日 HK\$299 的固定費用，以確保服務公平一致。 此外，租借服務（如筆記型電腦、電腦配件、手機充電器等）並不包含在房租或住客費用內。此類服務可按需提供，並另行收費。 我們建議旅客在預訂前詳細了解所有收費項目，以確保住宿過程順暢透明。LI JING Hostel 致力為每位旅客提供高質素且可負擔的住宿選擇。 Let me know if you'd like this styled into a pricing table or paired with booking buttons. Want to add a calculator for total cost estimation next?

For some characters in the above room charge web page, I want to bold them with blue color. Please tell me how to do?

Great choice, SIU! To make specific characters or phrases **bold and blue** on your room charge web page, you can use **inline HTML styling** or define a **CSS class**. Here are both methods:

Option 1: Inline Styling (Quick and Simple)

Use the `<span>` tag with `style` attributes directly in your HTML:

```
<span style="color: blue; font-weight: bold;">HK$999 per day</span>
```

This will render the text in **bold blue**.

Option 2: CSS Class (Cleaner and Reusable)

◆ Step 1: Define a CSS class in your stylesheet (e.g., `style.css`):

```
.bold-blue {  
  color: blue;  
  font-weight: bold;  
}
```

◆ Step 2: Apply the class in your HTML:

```
<span class="bold-blue">HK$299 per day</span>
```

This keeps your HTML clean and allows you to reuse the style across multiple elements.

Tip:

You can use this for any part of your pricing text, like room types or guest charges, to make them stand out visually.

Let me know if you'd like help applying this to your Django template or want to add hover effects next!

What's git reset command in GitHub? What are soft reset, mixed reset and hard reset? Please explain.

Great question, SIU! The `git reset` command is one of Git's most powerful tools, and it's used to **undo changes** by moving the current branch's pointer (called `HEAD`) to a different commit. This command is available in Git, which powers GitHub repositories—but it's not specific to GitHub itself.

Depending on the option you use—`--soft`, `--mixed`, or `--hard`—`git reset` affects different parts of your working environment:

What Does `git reset` Do?

- It moves the `HEAD` (your current commit reference) to a specified earlier commit.
- It can also modify the **staging area** (index) and/or your **working directory** (actual files).

Types of Reset Explained

Reset Type	What It Affects	Use Case
<code>--soft</code>	Moves <code>HEAD</code> only. Keeps staging area and working directory unchanged.	Undo a commit but keep all changes staged for recommit.
<code>--mixed</code>	Moves <code>HEAD</code> and resets staging area. Keeps working directory unchanged.	Unstage changes but keep them in your files. <i>(Default)</i>
<code>--hard</code>	Moves <code>HEAD</code> , resets staging area, and discards changes in working directory.	Completely undo changes and reset everything to a previous commit.

◆ Example Workflow

Assume your commit history is:

A -- B -- C (`HEAD`)

- `git reset --soft B:`
`HEAD` moves to B, but changes from C stay staged. You can recommit them.
- `git reset --mixed B:`
`HEAD` moves to B, changes from C are unstaged but still in your files.
- `git reset --hard B:`
`HEAD` moves to B, and all changes from C are **deleted** from staging and files.

Queries to Als_20251023(四)

⚠ Caution:

- `--hard` is **destructive**—you lose uncommitted changes.
- Always double-check before using it, especially in shared or production branches.

You can find a deeper breakdown on [Stack Overflow](#) [Stack Overflow](#) and [GeeksforGeeks](#) [GeeksForGeeks](#).

</li>
{% endif %}
</ul>
</div>
</div>
</nav>
```

Thanks for sharing the code, SIU! The issue with the “**Hostel Services**” link not turning bright/white when active is due to a small structural problem in your HTML: the `<li>` tag that should wrap the link is **missing its conditional logic and active class detection**.

Problem Summary

You currently have this:

```
<li {% if 'listings' in request.path %} class="nav-item mr-3 active" {% else %}
class="nav-item mr-3" {% endif %} >

<li class="nav-item mr-3">
    <a class="nav-link" href={% url "listings:listings" %}>Hostel services</a>
</li>
```

There are **two** `<li>` tags, but only one closes properly. The first one is empty and unclosed, and the second one is hardcoded without the active logic. As a result, the active class is never applied to the visible link.

How to Fix It

Queries to Als_20251023(四)

Replace the broken block with this corrected version:

```
<li {% if 'listings' in request.path %} class="nav-item mr-3 active" {% else %}
class="nav-item mr-3" {% endif %}>
  <a class="nav-link" href="{% url 'listings:listings' %}">Hostel services</a>
</li>
```

This ensures:

- The `<li>` wraps the link properly
- The `active` class is applied when the URL contains "listings"
- The link will appear bright/white when selected, just like the others

Let me know if you'd like help making the active state more visually distinctive with custom CSS or icons. Want to add dropdowns or group room types under a single menu next?

What is rebasing in Git/GitHub? Please explain in detail.

Rebasing in Git is a powerful technique used to **reapply commits from one branch onto another**, creating a cleaner, more linear project history. It's especially useful when working with feature branches and collaborating on shared repositories like those on GitHub.

What Is Git Rebase?

At its core, **git rebase** moves or "replays" a sequence of commits from one branch onto another. Instead of merging two branches (which creates a new merge commit), rebasing **rewrites the commit history** to make it appear as if your work was based on the latest version of the target branch all along.

Example Scenario

Let's say you branched off `main` to work on a feature:

```
main:    A---B---C
feature:  \---D---E
```

Now, `main` has progressed:

```
main:    A---B---C---F---G
```

If you run:

```
git checkout feature
git rebase main
```

Git will:

1. Find the common ancestor (commit C)
2. Temporarily remove commits D and E
3. Move the `feature` branch to point to G (the tip of `main`)
4. Reapply D and E on top of G

Result:

```
main:    A---B---C---F---G
feature:  \---D'---E'
```

Note: D' and E' are **new commits** (rewritten versions of D and E).

Why Use Rebase?

- **Cleaner history:** Avoids unnecessary merge commits.
- **Linear timeline:** Makes `git log` and `git bisect` easier to follow.
- **Better for pull requests:** Maintainers can fast-forward merge your branch.

When *Not* to Use Rebase

- **Avoid rebasing shared branches:** Since rebase rewrites history, it can cause confusion or conflicts for collaborators who have based work on the original commits.
- **Use with caution:** Always create a backup branch before rebasing.

Rebase vs Merge

Feature	<code>git merge</code>	<code>git rebase</code>
History	Preserves all commits + merges	Rewrites history to be linear
Merge commits	Yes	No
Collaboration	Safer for shared branches	Best for local or private branches
Simplicity	Easier to understand	Requires more care

Interactive Rebase

You can also use:

```
git rebase -i HEAD~n
```

To **edit, squash, reorder, or delete commits** interactively—great for cleaning up your commit history before pushing.

For a deep dive, check out [Git's official rebase guide](#) [Gitor](#) [Atlassian's tutorial](#) [Atlassian](#).

Let me know if you want to try a rebase step-by-step or visualize it with a diagram!

I'm working on the hostel project, which was cloned from another project ERB7. In ERB7, there is an app called doctors, the name of which still appears in various parts of the hostel project including the built-in admin interface of Django, VSCode explorer and Postgres database. In the hostel project's front-end, I've already renamed all "Doctor" to "Hostel Manager". Please tell me:

1. Must I rename all "Doctor" to "Hostel Manager" in the backend of the hostel project?

2. Is renaming all "Doctor" to "Hostel Manager" in the backend of the hostel project a difficult/risky job?

You're asking the right questions, SIU—this kind of backend renaming touches multiple layers of a Django project, so it's smart to assess before diving in. Here's a detailed breakdown:

 1. Must You Rename All "Doctor" to "Hostel Manager" in the Backend?

****Technically, no—but practically, yes.****

- If the backend still uses terms like `Doctor`, it can cause confusion for future developers, admins, or even automated scripts.
- The mismatch between frontend and backend terminology may lead to ****maintenance issues****, ****misunderstood data models****, or ****inconsistent admin interfaces****.
- If you're planning to maintain or expand the hostel project long-term, renaming ensures clarity and professionalism.

****So while it's not mandatory, it's highly recommended.****

 2. Is Renaming "Doctor" to "Hostel Manager" in the Backend Difficult or Risky?

****It depends on how deep the term "Doctor" is embedded. Here's what to consider:****

 Areas Affected by Renaming:

Component	Risk Level	Notes
Model class name (`Doctor`)	 Medium	Requires migration and database update
App name (`doctors`)	 High	Renaming Django apps is complex and can break imports, migrations, and admin
Database table names	 Medium	May need manual migration or renaming in Postgres
Admin interface labels	 Low	Can be changed with `verbose_name` and `verbose_name_plural`
URLs and views	 Medium	Update paths and references carefully
Templates and context variables	 Low	Mostly search-and-replace, but test thoroughly
VSCode explorer folders	 Low	Cosmetic, but rename carefully to avoid breaking imports

Page 14 of 18

Queries to Als_20251023(四)

🛠️ Tips to Do It Safely:

- ****Use Git branches****: Make changes in a separate branch so you can revert if needed.
- ****Rename models with migrations****:

```
```bashpython manage.py makemigrationspython manage.py migrate```
```
- **\*\*Avoid renaming the app folder (`doctors`) unless absolutely necessary\*\***. If you do, you'll need to:
  - Update `INSTALLED\_APPS`
  - Fix all import paths
  - Recreate migrations or manually adjust them
- **\*\*Use Django's `verbose\_name`\*\*** to change display labels without renaming the model:

```
```pythonclass Doctor(models.Model):class Meta:verbose_name = "Hostel Manager"verbose_name_plural = "Hostel Managers"```
```

🧠 Summary

| Question | Answer |

|-----|-----|

| Must you rename? | ☒ Recommended for clarity and consistency |

| Is it risky? | ☐ Moderate risk—safe if done carefully with version control |

Let me know if you want help writing a migration script or refactoring the model safely. Want to preview how the admin interface will look after the rename?

Queries to Als_20251023(四)

Following above, I've decided not to amend "Doctor" to "Hostel Manager" for the hostel project because it is just a one-off project which will not require any future maintenance. However, in the built-in Django interface panel, the sub-heading is "Welcome to Medical Center Admin Portal". I'd like to change it to "Welcome to LI JING Hostel Admin Portal". Please tell me how to do it? Is it a risky job?

Great decision, SIU—and you're absolutely right to want the Django admin panel to reflect your project's identity. The good news is: **changing the sub-heading in Django's admin interface is safe, easy, and low-risk**.

How to Change the Admin Panel Sub-Heading

You've already got this line in your `hostel/config/urls.py`:

```
```python
admin.site.index_title = "Welcome to Medical Center Admin Portal"
```
```

Step 1: Update the Text

Simply change it to:

```
```python
admin.site.index_title = "Welcome to LI JING Hostel Admin Portal"
```
```

You can also customize the other two lines if you wish:

```
```python
admin.site.site_header = "LI JING Hostel Admin"
admin.site.site_title = "LI JING Hostel Admin Portal"
admin.site.index_title = "Welcome to LI JING Hostel Admin Portal"
```
```

What Each Line Does

| Setting Purpose |
|--|
| ----- ----- |
| `site_header` Top-left brand name in the admin panel |
| `site_title` Title shown in browser tab |
| `index_title` Sub-heading on the admin homepage |

Queries to Als_20251023(四)

⚠ Is It Risky?

****Not at all.**** These are purely cosmetic changes:

- No database changes
- No migrations
- No impact on functionality

You can safely make these edits and restart your server to see the updated admin interface.

Let me know if you'd like to add a custom logo or change the color scheme of the admin panel next!
